[How Brake Light Wiring Works | HowStuffWorks](#)

The brake light wiring system in most cars is not overly complex. At one end, you have the lights themselves: bulbs in sockets connected to a wiring harness. At the other end is the brake switch, where the pedal presses down and creates contact that completes the circuit. The system draws power from the car's battery.

[What Causes the Brake Warning Light to Come On? | Angle's List](#)

Roberson says in most cases, a brake warning light indicates low brake fluid, which is often a result of worn brake pads. As the pad wears, the brake caliper piston extends further to keep the pad in contact with the rotor, he says.

[How To Diagnose Brake Light Problems - Ageo Automotive](#)

How To Diagnose Brake Light Problems. Brake lights seem extremely simple. Press the brake pedal and they come on, release, and they go off. Many things can and do go wrong. When they do, this guide can help find the problem. A volt ohm meter or a LED test light will be needed for some tests. Using these tools properly is very important. The point of the tool probe should only touch the contact.
