Radio frequency, i.e., microwave and radio wave radiation, is a specific component of the electromagnetic spectrum. Radio frequency radiation is in the non-ionizing portion of the spectrum. Non-ionizing radiation includes the lower frequencies in the electromagnetic spectrum such as ultraviolet and visible light, infrared, microwave and radio wave (See Table I).

[INTRODUCTION](#) Radiofrequency (or RF) Radiation refers to electromagnetic fields with frequencies between 300 kHz and 300 MHz, while Microwave (or MW) Radiation covers fields from 300 MHz to 300 GHz. Since they have similar characteristics, RF and MW radiation are usually treated together. As well, the lower-frequency [Microwave Radio Communications Advantages & Disadvantages ...](#)

Microwave radio signals are electromagnetic waves short wavelengths and high high frequencies between 500 MHz to 300 GHz. About 35 percent of all terrestrial

communication is maintained by microwave radio relay systems.

Microwave and radio frequency drying equipment - SAIREM

Microwave and radio frequency drying equipment Obtain optimal results from the application of microwave technology in industrial drying processes. The properties of microwaves make them very well suited to dry materials in a fast and elegant way.

Microwave transmission - Wikipedia

Microwave transmission is the transmission of information or energy by microwave radio waves. Although an experimental 40-mile (64 km) microwave telecommunication link across the English Channel was demonstrated in 1931, the development of radar in World War II provided the technology for practical exploitation of microwave communication.
