BATS: Methods of Plant Breeding

Plant breeding is defined as identifying and selecting desirable traits in plants and combining these into one individual plant. Since 1900, Mendel's laws of genetics provided the scientific basis for plant breeding. As all traits of a plant are controlled by genes located on chromosomes, conventional plant breeding can be considered as the manipulation of the combination of chromosomes. In

Traditional and Modern Plant Breeding Methods with ...

Plant breeding can be considered a coevolutionary process between humans and edible plants. People caused changes in the plants that were used for agriculture and, in turn, those new plant types allowed changes in human populations to take place. Plants yielding more generous harvests freed some of the people's time for developing art, handcrafting, and science, eventually leading to modern
