Below is the uncorrected machine-read text of this chapter, intended to provide our own search engines and external engines with highly rich, chapter-representative searchable text of each book. Because it is UNCORRECTED material, please consider the following text as a useful but insufficient proxy for the Study of poly(3,4-ethylenedioxythiophene) as a coating for ...

The reference sample, prior exposure to seawater, has a poor adhesion of PEDOT which is shown by the complete removal of the coating beyond the X-cut (Fig. 4a), corresponding to classification 0A after ASTM D3359-09 2.

Predicting the maintainability of XSL transformations

...

An outcome of this empirical study is a set of statistical models for predicting the maintainability of XSL transformations with relatively high accuracy. In addition, by analyzing the major influencers of code churn in these models, the paper identifies guidelines for designing XSL transformations with reduced future churn.
